The *Chalmers Signal* is an easy to use solution for **reporting real time shelter capacity**.

The *Chalmers Signal* is designed to serve **Out of the Cold** shelters. Out of the Cold shelters are seasonal, temporary, and volunteer run, making them difficult to deploy traditional shelter administration tools to. But *Chalmers Signals* deploy easily, and are easily packed away. Data from Chalmers Signals is displayed on a map on a website.

The Chalmers Signal team would like to meet with SSHA staff to discuss the specifics of deploying *Chalmers Signals* to **Out of the Cold** shelters.

The Chalmers team is prepared to deliver a *Chalmers Signal* to each **Out of The Cold** shelter location, and develop an easy-to-use front end website for the *Chalmers Signal* data to be displayed on.

The *Chalmers Signal* project is being developed as free and open source. You can find all the source code and design files on GitHub.
